

18 Flush design

Pushbutton, IP 40

Product can differ from the current configuration.

Dimensions [mm]

Additional Information

- For front dimensions 19 x 19 mm or Ø 19mm
- +/- terminals are not connected

Mounting cut-outs [mm]

Equipment consisting of (schematic overview)

Each Part Number listed below includes all the black components shown in the 3D-drawing.

To obtain a complete unit, please select the red components from the pages shown.

Switching system	Contacts	Switching action	Terminal	Part No.	Component layout	Wiring diagram	Weight

18 Drawings

Drawings

Actuator with snap-action switching element
Switching system

The snap-action switching system was designed for switching low powers in electronic circuits.
Single-break snap-action contact.

Material
Lens

Polymethylacrylate (PMMA), Polycarbonate (PC)

Material of contact

Gold contact on nickel plating

Actuator housing

Polyamide, colour black

Mechanical characteristics
Terminals

The terminals can be used as soldering terminals.
Max. wire diameter: $2 \times 0.5 \text{ mm}^2$
Max. wire cross-section of stranded cable $1 \times 0.75 \text{ mm}^2$
Wire cross-section of terminal $1.6 \times 0.4 \text{ mm}$

Tightening torque

for fixing nut max. 20 Ncm

Actuating force

1.4 N

Actuating travel

$2.2 \text{ mm} \pm 0.2 \text{ mm}$

Rebound time

$\leq 2.5 \text{ ms}$

Mechanical lifetime

Momentary action 2 million cycles of operation
Maintained action 1 million cycles of operation,
as per IEC 60512-5-9a

Electrical characteristics
Illumination

Operating voltage LED: 12 VDC $\pm 10\%$
24 VDC $\pm 10\%$
customer-specific *)

*) The series resistance for LEDs need to be determined and integrated by customers.

Operating current:	red	typ. 10 mA
	yellow	typ. 10 mA
	green	typ. 2 mA
	white	typ. 10 mA
	blue	typ. 10 mA

Contact resistance

$\leq 100 \text{ m}\Omega$ starting value (initial), as per IEC 60512-2-2b

Electrical life

$\geq 500\,000$ cycles of operation at 30 VDC, 100 mA, according to IEC 61058-1

Switch rating

min. $10 \mu\text{A}$ at $100 \mu\text{V}$
max. 100 mA at 42 VAC/VDC

Electric strength

500 VAC, 50 Hz, 1 min. between all terminals and earth,
as per IEC 60512-2-11

Environmental conditions
Storage temperature

$-40^\circ\text{C} \dots +80^\circ\text{C}$

Service temperature

$-25^\circ\text{C} \dots +65^\circ\text{C}$

Protection degree

IP 40 front side, as per IEC 60529

Shock resistance

(Single impacts, semi-sinusoidal)
50 g for 11 ms, as per IEC 60068-2-27

Vibration resistance

(sinusoidal) 10 g at 10–2000 Hz, amplitude 0.75 mm,
as per IEC 60512-4-4

EAO reserves the right to alter specifications without further notice.

18 Application guidelines

Suppressor circuits

When switching inductive loads such as relays, DC motors, and DC solenoids, it is always important to absorb surges (e.g. with a diode) to protect the contacts. When these inductive loads are switched off, a counter emf can severely damage switch contacts and greatly shorten lifetime.

Fig. 1 shows an inductive load with a free-wheeling diode connected in parallel. This free-wheeling diode provides a path for the inductor current to flow when the current is interrupted by the switch. Without this free-wheeling diode, the voltage across the coil will be limited only by dielectric breakdown voltages of the circuit or parasitic elements of the coil. This voltage can be kilovolts in amplitude even when nominal circuit voltages are low (e.g. 12VDC) see Fig. 2.

The free-wheeling diode should be chosen so that the reverse breakdown voltage is greater than the voltage driving the inductive load. The DC blocking voltage (VR) of the free-wheeling diode can be found in the datasheet of a diode. The forward current should be equal or greater than the maximum current flowing through the load.

To get an efficient protection, the free-wheeling diode must be connected as close as possible to the inductive load!

Switching with inductive load
